PROFILE

Product design lead for B2B enterprise SaaS, strongest on version one: the design system that doesn't exist yet, the journey nobody owns, the feature in a domain new to everyone. Ten years on IBM API Connect. Consumer e-commerce and industrial design before that.

EDUCATION

MFA
Academy of Art University
2009

RECOGNITION

7 international design awards, IBM API Connect
iF Design · Red Dot · Good Design, 2019–2023

IBM Outstanding Technical Achievement
×2
2021, 2023

SKILLSET

Design Systems · Design Leadership · Design Strategy · User Research & Instrumentation · Product-Led Growth · E-commerce & Conversion · Prototyping · AI-Assisted Design

EXPERIENCE

IBM
2023 — Now

Product Design Lead

Own design direction for API Connect end to end — the full platform, a team of five, and where the product goes as AI reshapes the category. Bring design in ahead of engineering on new capability areas, using AI-assisted domain research and functional prototypes to set direction before technical decisions harden.

IBM
2020 — 2023

Lead Product Designer

Led design for the move from on-premise to SaaS and the product's first AI integration. Mapped the end-to-end customer journey, stood up the product's first behavioral instrumentation, and doubled the rate of trial users reaching activation — then ran the buyer research that redirected entry from trial to demo.

IBM
2016 — 2020

Senior Product Designer

Built the product's design system as the first pilot adopter of IBM Carbon — patterns, spacing, tokens, iconography, color, and a component library for the design team. About 80% is still in use today, across two major Carbon upgrades. Led design for complex, high-stakes enterprise workflows.

Madison Reed
2013 — 2016

Mobile UX/UI Designer

Designed and launched the direct-to-consumer iOS app for at-home hair color — concept to App Store in 90 days, research through implementation. Ran A/B tests and usability sessions against it, and designed the product packaging so the brand held together across digital and physical.
